

P-Life Japan to Lecture on the Innovation of "P-Life" Technology at COP30 – As a Solution to the Plastic Problem

P-Life Japan Inc. (CEO: Isao Toyama) is pleased to announce that our Global Commercial Director, Bruna Folster, will be a speaker at COP30 (30th Conference of the Parties to the UN Framework Convention on Climate Change) in Belém, Brazil.

This lecture will be held on November 13 at 10:30 AM (Brazil local time), at the invitation of the Government of Amapá. At the "world's largest climate event," Ms. Folster will speak on "Biodegradability, Innovation, and Sustainability" realized by P-Life.

In this presentation, she will present the scientific basis for the true microbial decomposition of persistent plastics by P-Life, sharing results from joint research with Professor Kenji Miyamoto of the Faculty of Science and Technology at Keio University, as well as findings from international testing organizations.

Through this lecture at COP30, P-Life Japan will promote its P-Life technology—which contributes to the fundamental resolution of the microplastic problem and the realization of a circular economy—to the world, and contribute to building a sustainable future.

Go Green P-Life 

Redefining the answer
to plastic waste

A Sustainability and Innovation Specialist with over 10 years of experience in the plastic and biotechnology market.

"Our Bruna Folster is Brazilian and a person of great merit, who has worked for many years to promote P-Life technology in order to protect Brazil's environment. This presentation at COP30 is an honor that would never have been possible without her relentless efforts, and we at our company would like to express our deepest respect for Bruna Folster."

WE ARE P-Life 

In **2024, Eco Ventures Inc** underwent a strategic restructuring, with **Bruna Folster, Vice President** of Eco Ventures Brasil, joining the partnership of the mother company.

Additionally, the company became a **stakeholder in P-Life**, further consolidating its brand.
